

THE NATIONAL GAS COMPANY
OF TRINIDAD AND TOBAGO LIMITED

Odorizing For Your Safety:

We have added a harmless substance that has a bad smell like rotten eggs so that we can detect when there is a gas leak.

GULF OF PARIA

If you detect the smell of rotten eggs

- Warn others
- Leave the area ON FOOT right away
- Don't use cell phones or land lines until you are upwind of the area and no longer detect the smell
- Don't use matches, flashlights or anything that can spark
- Don't start vehicles
- Don't smoke
- Don't turn any lights on or off
- Call NGC's 24-hour Emergency Hotline 800-4427 and give details and your location
- Don't return to the area until you are given the all-clear by NGC and officials of the Fire Services

ATLANTIC OCEAN

Areas with odorized gas

**WE NEVER
COMPROMISE
ON SAFETY**

Natural Gas keeps our country moving forward.

Since natural gas has neither colour nor smell, NGC adds a harmless, but strong smelly substance called mercaptan to its supply at many locations. The smell will alert you to a gas leak and allows for early detection and repair of the line. We've already provided many consumers like schools, small factories, malls, hotels and CNG stations with odorized natural gas. And, for everyone's safety, we're on a drive to add the smelly substance to many more.

For natural gas emergencies or a rupture caused by someone digging too close to our pipelines, call
