

Pipeline to Union Industrial Estate

NGC is expanding its natural gas distribution and transmission network by constructing a pipeline and associated facilities to the Union Industrial Estate (UIE) to supply natural gas to industrial and commercial customers on the Estate.

Over the next 6 months, we will be building:

- A 3.2 km long, 24" diameter pipeline, which will be connected to the 56" Cross Island Pipeline (CIP) near Pablito Trace. This pipeline will run westwards parallel to CIP.
- A 2 km long, 24" diameter pipeline tapped off from the above line, which will run northwards to UIE.
- One 16" diameter distribution line within UIE.
- An 8" diameter polyethylene pipeline to supply small customers on the La Brea Industrial Estate, and
- Facilities at UIE for condensate removal, pressure regulation and metering of natural gas.

NGC expects to complete the project by May, 2010.
